1 Why is it called "Linear Algebra"? Linear algebra is the study of linear functions/equations. A linear equation is one in which each term is either a constant or the product of a constant and the 1st power of a single variable. A linear function is one which obeys the two properties  $f(x) + f(y) = f(x + y)$  and  $f(x) = f(x)$ .

Until the 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract. A vector space over a field F (often the field of the real numbers ...
