Abstract. The use of United States Air Force (USAF) aircraft and person - nel to move wartime casualties is well established. This asset is also an integral part of the National Disaster Medical System (NDMS). The Aeromedical Evacuation (A/E) system, a part of Air Mobility Command, is a highly disciplined function capa- ble of transporting thousands of civilian casualties at all levels of criticality.

Its mission is to provide fixed-wing movement of patients requiring supervision by Aeromedical Evacuation personnel to locations offering appropriate levels of medical care. During contingencies, the AE system can operate as far forward as fixed-wing aircraft are able to conduct air/land operations.

### **Aeromedical Evacuation > Air Mobility Command > Display**

Aeromedical evacuation usually refers to the use of military transport aircraft to carry wounded personnel. The first recorded British ambulance flight took place in 1917 in the Sinai peninsula some 30 miles south of El Arish when a Royal Aircraft Factory B.E.2c flew out a soldier in the Imperial Camel Corps who had been shot in the ankle during the raid on Bir el Hassana. The flight took 45 minutes; the same journey by land would have taken some 3 days. In the 1920s several aeromedical services

Edited by eminent experts in the field, this text brings together medical specialists from all four branches of the armed services. This book discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. The rapid-fire response of aeromedical evacuation services is required to treat and transport patients injured in regional conflicts, in mass emergencies and natural disasters, in the face of terrorist attack, and in the event of biological or chemical warfare.
