Generations of plant scientists have been fascinated by alpine plant life - with the exposure of organisms to dramatic climatic gradients over a very short distance. This comprehensive text treats a wide range of topics: alpine climate and soils, plant distribution and the treeline phenomenon, physiological ecology of water-, nutritional- and carbon relations of alpine plants, plant stress and plant development, biomass production, and aspects of human impacts on alpine vegetation.

Life Cycle: Despite their slow growth, alpine plants have a very quick yearly life cycle. They are the sprinters of the plant world—they flower, get pollinated, and set seed in a short window. These plants are long term planners, though. Research shows that they set their flower buds 2-4 years before the flowers will actually bloom.
