with scale in mind. However, the need to build high-performing APIs that scale with the business ecosystem is pressuring many development teams to build APIs that may be restricting business growth.

Best Practices for Building a Secure and Scalable API ...

In a large-scale environment, many clients using different versions of a web API can result in a significant amount of duplicated data in a server-side cache. This issue can become acute if a client application communicates with a web server through a proxy that implements caching, and that only forwards a request to the web server if it does not currently hold a copy of the requested data
