Gas chromatography-mass spectrometry is an analytical method that combines the features of gas-chromatography and mass spectrometry to identify different substances within a test sample. Applications of GC-MS include drug detection, fire investigation, environmental analysis, explosives investigation, and identification of unknown samples, including that of material samples obtained from planet Mars during probe missions as early as the 1970s. GC-MS can also be used in airport security to ...

### Gas chromatography-mass spectrometry - Wikipedia

The software package Gas Chromatography-Mass Spectrometry: A Knowledge Base, by F.A. Settle, Jr. and M.A. Pleva provides rapid access to a wealth of current information in the GC-MS field. Its three diskettes (5 1 / 4 inch) allow the user three ways to access: the index mode, the tree mode and a keyword search mode. The package may be purchased separately and is available for the IBM-PC and compatibles.

### Basic Gas Chromatography-Mass Spectrometry: Principles and ...

Description. The book begins by covering the basic principles of both gas chromatography (GC) and mass spectrometry (MS) to the extent necessary to understand and deal with the data generated in a GC-MS analysis. The focus then turns to the particular requirements created by a direct combination of these two techniques into a single instrumentation system.

### Basic Gas Chromatography - Mass Spectrometry | ScienceDirect

The technology had its start 60 years ago in Midland, Michigan, with the pairing of two powerful analytical techniques — gas chromatography (GC) and mass spectrometry (MS). By coupling the ability of GC to separate a chemical mixture with the ability of MS to identify its components, the new, combined technique proved revolutionary.

### Gas Chromatography-Mass Spectrometry

Gas chromatography-mass spectrometry combines the features of gas-liquid chromatography and mass spectrometry. This makes it possible to identify different substances within a test sample. GC-MS has many uses include drug detection, fire investigation, environmental analysis and explosives investigation. It can also be used to identify unknown samples. GC-MS can also be used in airport security to detect substances in luggage or on human beings. Additionally, GC-MS can identify trace ...

### Gas chromatography-mass spectrometry - Simple English ...

Gas Chromatography Mass Spectrometry (GC/MS) is a common scientific analytical method for determining individual substances within a sample. Within the context of drug testing, GS/MS is utilized to verify what substances are found within an employee's sample (blood or urine).

A mass spectrometer is an analytical instrument that produces a beam of gas ions from samples (analytes), sorts the resulting mixture of ions according to their mass-to-charge(m/z) ratios using electrical or magnetic fields, and provides analog or digital output signal (peaks) from which the mass-to charge ratio and the intensity (abundance) of each detected ionic species may be determined.

Gas chromatography-mass spectrometry now serves as a curing process for newborns to detect whether they have congenital metabolic disease. As doctors have presumed, these diseases are inborn or are instilled in a person upon their birth. Through GCMS, the diseases are detected at an early age through inspecting the metabolic process of the newborn.

Inductively coupled plasma mass spectrometry (ICP-MS) is a type of mass spectrometry that uses an Inductively coupled plasma to ionize the sample. It atomizes the sample and creates atomic and small polyatomic ions, which are then detected.It is known and used for its ability to detect metals and several non-metals in liquid samples at very low concentrations.
