This long-awaited book is an autobiographical account by Professor Alain Carpentier of his work on the surgical management of heart valve disease and in particular that of the mitral valve. Although it includes reference to surgery on the tricuspid and aortic valves its major attraction will be the complete exposé of the author's techniques and rationale behind his 'school' of mitral valve reconstruction.

cardiothoracic surgeons in these methods. It will define the operative pathway of each procedure, from beginning to end, for surgeons who wish to be a complete robotic cardiac surgeon and include hints and procedural pitfalls derived from the experiences of chapter contributors. The book will be illustrated with high quality illustrations and color photographs from surgical operations where appropriate. Leading surgeons have contributed to the book and provided sample illustrations for their respective chapters. Anesthetic and cardiopulmonary support preparation for each operation will be included and selected references will be provided to emphasize evidence-based outcomes.

Robotic Cardiac Surgery is a comprehensive guide to

robotic/totally endoscopic cardiac surgery. The book is intended to provide in-depth information regarding the history of robotic surgical systems, their components and principles. It emphasizes patient selection, perioperative management, anesthesia considerations and management, operative techniques and management, postoperative care and results. Extensive, detailed photographs and illustrations of different kinds of robotic surgery are also included. It provides cardiac surgeons, cardiac anesthesiologists, and perfusionists with a comprehensive review of current robotic cardiac surgeries and related knowledge. Changqing Gao, MD, is a professor at the Department of Cardiovascular Surgery, PLA General Hospital, Beijing, China.

The sixth edition of this acclaimed and established operative atlas continues to provide a unique level of comprehensive detail on operative surgery of the heart and great vessels. With an international list of authors, the chapters have been updated and complemented by the same high quality artwork that has established this operative guide as the gold standard reference for the cardiac surgeon. This new edition retains the format of initial principles and justification for the procedure, followed by preoperative investigations and preparation, the operative procedure, and postoperative management. New chapters have been added on the latest techniques such as minimal invasive surgery, robotic surgery and off-pump bypass surgery. The chapters are arranged in seven sections, with each section emphasising the overall

management of patients, tricks of the trade of individual authors and discussion of technical and clinical judgement. With this new and updated edition, Operative Cardiac Surgery remains the pre-eminent operative guide to a full range of cardiac conditions. Video clips of cardiac procedures, both common and rare, are included within the VitalSource edition. Print Versions of this book also include access to the ebook version.

This book follows the concept of perceiving the entire aorta as one functional organ assuming that all individual pathologies and local interventional procedures affect the up- and downstream segments with consequences for complications and disease progression. Thus any preventive

Valve Reconstruction or surgical strategy must recognize the aortic disease in its entirety. The book intends to cover the full spectrum of aortic pathologies, mechanisms and functional interplay. The latest available diagnostic tools and options for surgical treatment are presented by the foremost experts in their field in state-of-the-art reviews. The reader is provided with the most current and comprehensive insight into all fundamental and clinical aspects of aortic disease. All chapters are carefully complemented with figures and illustrations.

Minimally invasive mitral valve surgery is a relatively new field that cardiac surgeons are increasingly embracing. Its adoption is exponentially increasing, and patients and cardiologists are demanding this with more enthusiasm. This

Valve Reconstruction is a current subject of great interest and contemporary results are already present, with more awaiting to be published. The book describes the whole journey through the set-up of a minimally invasive mitral valve surgery program, pertinent investigations, patient selection, different approaches (including endoscopic and robotic), cardio-pulmonary bypass, re-operations and its application with tricuspid and atrial fibrillation surgery. This book is directed to all training cardiac surgeons and cardiologists, consultant cardiac surgeons and cardiologists, anaesthetists, intensive care specialists and perfusionists. This is the first book authored exclusively on this subject. The two editors are leading authorities on this subject in UK and are mentors for many surgical programs. Every chapter is authored by specialists in that particular

This is the first comprehensive review of the edge-to-edge technique for mitral repair, which was introduced into the surgical armamentarium in 1991 by one of the authors, Ottavio Alfieri. The surgical technique employed in edge-to-edge repair today provides the basis for the only reliable method of percutaneous correction of degenerative mitral regurgitation. The book traces the evolution of the edge-to-edge technique from a surgical to a percutaneous approach, documenting indications, contraindications, technical aspects, controversies and clinical outcomes. Detailed attention is devoted to the MitraClip procedure, which reproduces the

Alfieri stitch percutaneously and has to date been used in more than 20,000 patients worldwide. The state of the art in MitraClip therapy is described, with clear explanation of when and how to use the MitraClip system. The reader will learn all aspects of percutaneous edge-to-edge repair, which is recommended for use in carefully selected patients in the new ESC/EACTS guidelines for the management of valvular heart disease and in the ESC guidelines on heart failure. The group at San Raffaele Hospital, Milan, has accumulated by far the largest experience in the world with the technique and over the years has been very active in its promotion and scientific evaluation. This book reflects that depth of knowledge and will be of great interest to cardiac surgeons and interventional and clinical cardiologists.

Highly illustrated, practical full-color text on all aspects of TEE to assess cardiac function in patients undergoing heart surgery.

In this book it is shown how this specialty has evolved over the past 20 years, with significant advances in diagnosis and palliative and definitive techniques for correction of cardiovascular diseases. The book contains 10 chapters, which are showing the classical adult and pediatric cardiac surgery.
