Reduction reactions are the opposite of oxidation. Originally, this was believed to signify simply the loss of oxygen from a compound. That is a good rule of thumb, but is not always the case. A common example is the reduction of iron ore. Oxygen is removed, iron ore and carbon dioxide are formed. This occurs when iron ore and carbon are heated together.

Iron also is an oxidation–reduction reaction. 636 Chapter 20 Redox Reactions Figure 20-1 The reaction of magnesium and oxygen involves a transfer of electrons from magnesium to oxygen. Therefore, this reaction is an oxidation–reduction reaction. Using the classifications given in Chapter 10, this
