to mass starvation. Since the area was too remote for hunters, the wildlife service decided to bring in natural predators to control the deer population. It was hoped that natural predation would keep the deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd. In 1971,

deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd.

Deer: Predation or Starvation Key
Deer: Predation or Starvation

Introduction: An island population of deer has no predators and the island is too remote for hunters. Is it better to let nature take its course with the deer population or should predators (wolves) be introduced onto the island? This activity could be done before or after playing WolfQuest. •
