Desert ecology is the study of interactions between both biotic and abiotic components of desert environments. A desert ecosystem is defined by interactions between organisms, the climate in which they live, and any other non-living influences on the habitat. Deserts are arid regions that are generally associated with warm temperatures; however, cold deserts also exist.

Plant Ecology of the Sonoran Desert Region. Mark A. Dimmitt. You could easily recognize a desert even if you were blind- folded. You would discover that you could walk fairly long distances without bumping into plants, and when you did the encounter would likely be painful. Even standing still you would have unmistakable clues about your location.

Mechanistic principles from engineering, meteorology, and soil physics are integrated with ecology and physiology to develop models for prediction of animal behavior. The Mojave Desert biome and the desert iguana are used to illustrate these principles. A transient energy balance model for animals in an outdoor environment is presented. The concepts and relationships have been tested in a wind ...

The combination of anthropogenic riparian destruction (including cattle grazing) and groundwater overdraft has profoundly impacted deserts and deserves to be treated in a book on desert ecology. The rich riparian forests that once criss-crossed the southwest are now rare, due to urban growth, agriculture, ranching, surface water diversion, and over-pumping of ground water.
