Abstract: Detection and parameter estimation of a chirped radar signal in noise is a problem of many applications. It is characterized by the fact that some of the measurements consist of noise only. Modern statistical signal processing techniques are applied on a discrete version of the received

Estimation theory is a
branch of statistics that
deals with estimating the
values of parameters
based on measured
empirical data that has a
random component.

The parameters

Download Free Detection And

describe an underlying physical setting in such a way that their value affects the distribution of the measured data. An estimator attempts to approximate the unknown parameters using the measurements. In estimation theory, two approaches are generally considered. The probabilistic approach (described in
