The story of one man's evolution from naive and ambitious young intern to world-class neurosurgeon. With poignant insight and humor, Frank Vertosick Jr., MD, describes some of the greatest challenges of his career, including a six-week-old infant with a tumor in her brain, a young man struck down in his prime by paraplegia, and a minister with a .22-caliber bullet lodged in his skull. Told through intimate portraits of Vertosick's patients and unsparring yet fascinatingly detailed descriptions of surgical procedures, *When the Air Hits Your Brain*--the culmination of decades spent struggling to learn an unforgiving craft--illuminates both the mysteries of the mind and the realities of the operating room.

A Pennsylvania neurosurgeon chronicles his evolution from a naive young intern to a world-class surgeon and his toughest challenges, from a six-week-old infant with a brain tumor to a minister with a bullet in his head. Reprint. NYT. PW.

Using stories of patients in pain, a neursurgeon and author of *When the Air Hits Your Brain* explains how pain evolved and why it functions the way it does, providing a mixture of medicine, history, anthropology and inspiration. Reprint. 20,000 first printing.

Neurosurgery is an arrogant and yet intensely humbling occupation. Physicists might distill Creation into a few differential equations and biologists see life's wonders in a DNA helix. Only the neurosurgeon actually touches the fleshy incarnation of Nature's greatest mystery - the human brain - and runs the risks that come with it. The true mystery of neurosurgery lies in the lifelines of surgeon and patient. In this fragile bond, the real drama of ordinary patients and ordinary doctors rising to meet extraordinary situations is played out. For the patient, an operation is a single defining moment. For the neurosurgeon, each moment in the operating room represents the culmination of decades spent struggling to learn an unforgiving craft. When these two join there is drama, often too much of it. This book chronicles one man's evolution from a naive and ambitious young intern into a member of that singular breed of doctor - the neurosurgeon. Told through intimate portraits of his patients and unsparring yet fascinatingly detailed descriptions of surgical procedure, *When the Air Hits Your Brain* is a poignant and sometimes shockingly funny account of the mysteries of the mind and the operating room.

Welcome to tiger country: the treacherous territory where a single wrong move by a brain surgeon can devastate-or end-a patient's life. This is the terrain world-renowned neurosurgeon Keith Black, MD, enters every day to produce virtual medical miracles. Now, in *BRAIN SURGEON*, Dr. Black invites readers to shadow his breathtaking journeys into the brain as he battles some of the deadliest and most feared tumors known to medical science. Along the way, he shares his unique insights about the inner workings of the brain, his unwavering optimism for the future of medicine, and the extraordinary stories of his patients--from ministers and rock stars to wealthy entrepreneurs and uninsured students-whom he celebrates as the real heroes. *BRAIN SURGEON* offers a window into one man's remarkable mind, revealing the anatomy of the unflinching confidence of this master surgeon, whose personal journey brought him from life as a young African-American boy growing up in the civil rights era South to the elite world of neurosurgery. Through Dr. Black's white-knuckle descriptions of some of the most astonishing medical procedures performed today, he reveals the beauty and marvel of the human brain and the strength and heroism of his patients who refuse to see themselves as victims. Ultimately, *BRAIN SURGEON* is an inspiring story of the struggle to overcome odds--whether as a man, a doctor, or a patient. PRAISE FOR *BRAIN SURGEON* "An inspirational book about true heroes - readers will marvel at Keith Black's achievements both as a doctor and as a man, and will be in awe of his patients' courage and will to survive." --Denzel Washington "A rare, behind-the-curtain look at the life of one of the most pre-eminent neurosurgeons in the world." --Sanjay Gupta, MD, Chief Medical Correspondent, CNN

In this book, we have hand-picked the most sophisticated, unanticipated, absorbing (if not at times crackpot!), original and musing book reviews of "When the Air Hits Your Brain: Tales from Neurosurgery." Don't say we didn't warn you: these reviews are known to shock with their unconventionality or intimacy. Some may be startled by their biting sincerity; others may be spellbound by their unbridled flights of fantasy. Don't buy this book if: 1. You don't have nerves of steel. 2. You expect to get pregnant in the next five minutes. 3. You've heard it all.

The 2017 National Book Critics Circle (NBCC) Finalist, International Bestseller, and a Kirkus Best Nonfiction Book of 2017! "Marsh has retired, which means he's taking a thorough inventory of his life. His reflections and recollections make *Admissions* an even more introspective memoir than his first, if such a thing is possible." --The New York Times "Consistently entertaining...Honesty is abundantly apparent here--a quality as rare and commendable in elite surgeons as one suspects it is in memoirists." --The Guardian "Disarmingly frank storytelling...his reflections on death and dying equal those in Atul Gawande's excellent *Being Mortal*." --The Economist Henry Marsh has spent a lifetime operating on the surgical frontline. There have been exhilarating highs and devastating lows, but his love for the practice of neurosurgery has never wavered. Following the publication of his celebrated New York Times bestseller *Do No Harm*, Marsh retired from his full-time job in England to work pro bono in Ukraine and Nepal. In *Admissions* he describes the difficulties of working in these troubled, impoverished countries and the further insights it has given him into the practice of medicine. Marsh also faces up to the burden of responsibility that can come with trying to reduce human suffering. Unearthing memories of his early days as a medical student, and the experiences that shaped him as a young surgeon, he explores the difficulties of a profession that deals in probabilities rather than certainties, and where the overwhelming urge to prolong life can come at a tragic cost for patients and those who love them. Reflecting on what forty years of handling the human brain has taught him, Marsh finds a different purpose in life as he approaches the end of his professional career and a fresh understanding of what matters to us all in the end.

A fascinating guide to a career in neurosurgery written by award-winning journalist John Colapinto and based on the real-life experiences of an expert in the field--essential reading for someone considering a path to this most challenging profession. Choosing what to do with your life begins with imagining yourself in a career, actually meeting the emotional, physical, and intellectual demands of the job. Often regarded as one of the most technically and emotionally demanding of surgical disciplines, becoming a neurosurgeon requires years of study. This practical guide offers a unique opportunity to see what daily life for a neurosurgeon is like, from someone who has mastered the profession and can explain what the risks and rewards of the job really are. Joshua Bederson is the chief of Neurosurgery at the esteemed Mt. Sinai Hospital in New York City. New Yorker writer John Colapinto brings to vivid life what Dr. Bederson's professional life is like to show all the varied facets of his work, from extensive study and research to brain operations, one-on-one consultations with patients, and even staff meetings with fellow surgeons and students. Since Mt. Sinai is a teaching hospital, we learn alongside the residents and interns how Bederson trains neurosurgeons, passing along the knowledge and skills he honed over decades. The result is a multidimensional portrait of a man and a department, a practical guide for how to enter and learn the profession, as well as a moving glimpse into the world of patients and doctors who face some of life's most harrowing challenges.
