Ex Post And Ex Ante

On the other hand, ex-post means "after the event," while ex-ante means "before the event." Ex-post is backward-looking, and it looks at results after they have already occurred. For investment companies, analysts can use historical returns to forecast the probability of making a profit or loss on an investment.

Ex-Ante vs. Ex-Post - Overview, How They Work, Examples

Ex ante means "before the event". When you're making a prediction, you're doing so ex ante. The opposite of ex ante is ex post, which means after the event. This is a useful framework because people often conflate the two in their reasoning. The ' Expected Value ' entry made the claim that buying a lottery ticket was a bad idea, but I never specified the point at which you were deciding it was irrational.

Ex Ante and Ex Post - What the difference is and examples ...

Ex- Post and Ex- Ante is terms of Latin origin that mean "after the event" and "before the event" respectively. In the field of finance, these terminologies depict the returns from an investment or any other economic activity. Ex-post returns are the returns that an investor has already got from an investment. In other words, it is the actual or historical return from security.

The AIDS epidemic is one of the greatest development challenges of the 20th century. Since 1986, the World Bank has supported member countries' efforts to fight the epidemic in many ways including committing over US\$550 million to HIV/AIDS prevention and mitigation efforts. This paper, the first comprehensive study of all World Bank HIV/AIDS-related activities, assesses the appropriateness of Bank interventions from the perspective of public economies and reviews the economic evaluation and implementation of projects.

Over the past two decades, many advances have been made in the decision support system (DSS) field. They range from progress in fundamental concepts, to improved techniques and methods, to widespread use of commercial software for DSS development. Still, the depth and breadth of the DSS field continues to grow, fueled by the need to better support decision making in a world that is increasingly complex in terms of volume, diversity, and interconnectedness of the knowledge on which decisions can be based. This continuing growth is facilitated by increasing computer power and decreasing per-unit computing costs. But, it is spearheaded by the multifaceted efforts of DSS researchers. The collective work of these researchers runs from the speculative to the normative to the descriptive. It includes analysis of what the field needs, designs of means for meeting recognized needs, and implementations for study. It

encompasses theoretical, empirical, and applied orientations. It is concerned with the invention of concepts, frameworks, models, and languages for giving varied, helpful perspectives. It involves the discovery of principles, methods, and techniques for expeditious construction of successful DSSs. It aims to create computer-based tools that facilitate DSS development. It assesses DSS efficacy by observing systems, their developers, and their users. This growing body of research continues to be fleshed out and take shape on a strong, but still-developing, skeletal foundation.

Covering over one-hundred topics on issues ranging from Law and Neuroeconomics to European Union Law and Economics to Feminist Theory and Law and Economics, *The Oxford Handbook of Law and Economics* is the definitive work in the field of law and economics. The book gathers together scholars and experts in law and economics to create the most inclusive and current work on law and economics. Edited by Francisco Parisi, the Handbook looks at the origins of the field of law and economics, tracks its progression and increased importance to both law and economics, and looks to the future of the field and its continued development by examining a cornucopia of fields touched by work in law and economics. The uniqueness of its breadth, depth, and convenience make the volume essential to scholars, students, and contributors in the field of law and economics.

Diploma Thesis from the year 2003 in the subject Business economics - Investment and Finance, grade: 1,0 (A), Bielefeld University (Applied Computer Science), 139 entries in the bibliography, language: English, abstract: This paper critically reviews approaches for the evaluation of investments in information systems prior to their implementation. First, the ground for the review is prepared by examining characteristics of evaluation, information systems and value. A classification of 54 evaluation approaches identified in English and German literature is then presented. Examples of each class are reviewed and their advantages and drawbacks are discussed. Their use in evaluation practice is analysed through the examination of empirical studies and directions for future research are given. Today, a significant share of corporate funds is spent on the implementation, upgrading and maintenance of an information system (IS). Recent studies show that in 2001 the IS budget of companies worldwide accounted for an averaged 8.8% of total corporate revenues (cf. CSC, 2001). Consequently, a thorough evaluation of investments in information systems before, during and after the implementation of a project is important. However, the normative literature reports a great deal of difficulty in the appraisal of these investments (cf. Irani, 2002:11). Although IS evaluation has been an issue for both academics and managers for more than three decades now, there are still serious concerns about how to select projects for investments, how to control the development and how to measure benefits after the implementation (cf. Farbey, 1999:189). This concern has been matched by increased research activity

which prevailed through two broad streams. The first stream aimed to directly measure the payoff of IS investments for companies and came to mixed conclusions (cf. Dehning and Richardson, 2002:8). The second stream addressed the question of how IS investments can actually be assessed by decision-makers and particularly focussed on the research of evaluation criteria, evaluation methods and the very nature of the evaluation process (cf. Avgerou, 2000:570). Of late, several deficiencies in the field of evaluation methods have induced calls for in-depth research. Academics have criticised the current state of the field as being immature and fragmented (cf. Mahmood and Szewczak, 1999:491) and have thus demanded "an overview of the whole panoply of evaluation methods, together with ... the assumptions they depend on ...[in order to enable]... the identification of gaps." (Farbey, Land and Targett, 1999: 205). [...]
