Reinforce your knowledge of radiographic positioning and anatomy, and produce quality radiographs! Corresponding to the chapters in Bontrager and Lampignano's Textbook of Radiographic Positioning and Related Anatomy, 8th Edition,this practical workbook offers a wide variety of exercises including situation-based questions, film critique questions, laboratory activities, and self-evaluation tests. A wide variety of exercises include questions on anatomy, positioning critique, and image evaluation, with answers at the end of the workbook Chapter competencies are formatted as a set of tasks that you should be able to perform after working through the material.Situational questions describe clinical scenarios, then ask you to apply your knowledge to real-life examples.Film critique questions prepare you to evaluate the quality of radiographs and ask what positioning corrections need to be made to improve the image.Laboratory exercises provide hands-on experience as you perform radiographs using phantoms, evaluate the images, and practice positioning.Self-tests at the ends of chapters help you assess your learning with multiple choice, labeling, short answer, and true/false questions. Updated content matches the revisions to the textbook.Stronger focus on computed and digital radiography in questions includes images from the newest equipment.Expanded coverage of computed tomography reflects changes in practice.

Master radiographic positioning and produce quality radiographs! Bontrager's Workbook for Textbook of Radiographic Positioning and Related Anatomy, 9th Edition offers opportunities for application to enhance your understanding and retention. This companion Workbook supports and complements Lampignano and Kendrick's text with a wide variety of exercises including situational questions, laboratory activities, self-evaluation tests, and film critique questions, which describe an improperly positioned radiograph then ask what corrections need to be made to improve the image. A wide variety of exercises include questions on anatomy, positioning critique, and image evaluation, with answers at the end of the workbook, to reinforce concepts and assess learning. Situational questions describe clinical scenarios then ask a related question that requires you to think through and apply positioning info to specific clinical examples. Chapter objectives provide a checklist for completing the workbook activities. Film critique questions describe an improperly positioned radiograph then ask what corrections need to be made to improve the image, preparing you to evaluate the quality of radiographs you take in the clinical setting. Laboratory exercises provide hands-on experience performing radiographs using phantoms, evaluating the images, and practicing positioning. Self-tests at the end of chapters help you assess your learning with multiple choice, labeling, short answer, matching, and true/false questions. Answers are provided on the Evolve site. NEW! Updated content matches the revisions to the textbook, supporting and promoting understanding of complex concepts. NEW and UPDATED! Stronger focus on computed and digital radiography, with images from the newest equipment to accompany related questions, prepares you for the boards and clinical success.

This CD-ROM on the bony thorax illustrates the positions and projections identified as essential competency for beginning radiographers. Quizzes, review questions and evaluation criteria encourage critical thinking and integration of the information presented.

This four-color lab manual contains 21 lab exercises, most of which can be completed within two hours and require minimal input from the instructor. To provide flexibility, instructors can vary the length of most exercises, many of which are divided into several parts, by deleting portions of the procedure without sacrificing the overall purpose of the experiment. Taking a consistent approach to each exercise, the second edition provides an even clearer presentation, updated coverage, and increased visual support to enable students to apply concepts from the Human Biology course.
