And phase-to-ground insulation. The high voltage conductors, circuit breaker interrupters, switches, current transformers, and voltage transformers are in SF6 gas inside grounded metal enclosures. The atmospheric air insulation used in a conventional, air-insulated substation (AIS) requires meters of air insulation to do what SF6 can do in centimeters.

execution. For utilities providing electricity in urban areas, gas-insulated substations (GIS) are often the right fit due to their advantages in space requirements, aesthetics and reliability.

An Integrated Delivery for Gas-Insulated Substation Execution

A cross-section view of a 242-kV GIS shows above the construction and typical dimensions. Construction of GIS Substation: The modules are joined using bolted flanges with an “ O ” ring seal system for the enclosure and a sliding plug-in contact for the conductor. Internal parts of the GIS are supported by cast epoxy insulators. These support insulators provide a gas barrier between parts of the GIS or are cast with holes in the epoxy to allow gas
