7. 1. 1 Background Uncertainty can be considered as the lack of adequate

Download File PDF Guidebook To Decision

information to make a decision. It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems. In general, - certainty can be broadly classified into three types (Bae et al. 2004; Ha-Rok 2004; Klir and Wierman 1998;

Download File PDF Guidebook To Decision

Modeling Methods Oberkampf and Helton 2002; Sentz 2002). The first one is aleatory uncertainty (also referred to as stochastic uncertainty or inherent - certainty) □ it results from the fact that a system can behave in random ways. For example, the failure of an engine can be modeled as an aleatory

Download File PDF Guidebook To Decision

Uncertainty because the failure can occur at a random time. One cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered (available). The second one is epistemic uncertainty (also known as subjective uncertainty or reducible - certainty) □ it is the

Download File PDF Guidebook To Decision

Uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process. By gaining information about the system or environmental factors, one can reduce the epistemic uncertainty. For example, a lack of experimental data

Download File PDF Guidebook To Decision

to characterize new materials and processes leads to epistemic uncertainty.

This paper describes the results of Recommendation 14 of the Integrated Nuclear Materials Management Plan (INMMP) which was the product of a
