computers is much more  
demanding than that for  
sequential computers  
The programming  
environment is a  
collection of software  
tools and system  
software support To  
break this  
hardware/software  
barrier , we need a  
parallel software  
environment Which  
provide better tools for

Source-to-source  
compilers are a type of  
compiler that takes a  
high-level language as  
its input and outputs a  
high-level language. For

Science And

# Access PDF Languages And

example, an automatic parallelizing compiler will frequently take in a high-level language program as an input and then transform the code and annotate it with parallel code annotations (e.g. OpenMP ) or language constructs (e.g. Fortran's DOALL statements).
