that varies in sound and spelling without changing the meaning. The term allomorph describes the realization of phonological variations for a specific morpheme. The different allomorphs that a morpheme can become are governed by morphophonemic rules. These phonological rules determine what phonetic form, or specific pronunciation, a morpheme will take based on the phonological or morphological context in

Allomorph - Wikipedia

Central to phonology are instances that are realized differently in different contexts. Traditionally, it is said that such instances show allomorphy because allomorphy is understood as a situation in which two or more different morphs share the same grammatical or semantic function and hence are allomorphs of one morpheme.

ALLOMORPHY IN OPTIMALITY THEORY ... - Geert Booij's Page ...

The classical generative approach to allomorphy is that all allomorphs of a morpheme are derived from a common underlying form by means of a set of (possibly ordered) phonological rules. A nice example of applying this idea of a common underlying form and a set of ordered rules to Dutch allomorphy phenomena can be found in Smith (1973).
