During his nearly 50 years of sportswriting, including 28 at Sports Illustrated, readers of Dr. Z came to expect a certain alchemical, trademark blend: words which were caustic and wry, at times self-deprecating or even puzzling, but always devilishly smart with arresting honesty. In 2008, Zimmerman had nearly completed work on his personal memoirs when a series of strokes left him largely unable to speak, read, or write. Compiled and edited by longtime SI colleague Peter King, these are the stories he still wants to see told. Dr. Z's memoir is a rich package of personalities, stories never shared about such characters as Vince Lombardi, Walter Payton, Lawrence Taylor, Joe Namath, Johnny Unitas, Donald Trump, Rupert Murdoch, and Hunter S. A fascinating exploration of how insights from computer algorithms can be applied to our everyday lives, helping to solve common decision-making problems and illuminate the workings of the human mind All our lives are constrained by limited space and time, limits that give rise to a particular set of problems. What should we do, or leave undone, in a day or a lifetime? How much messiness should we accept? What balance of new activities and familiar favorites is the most fulfilling? These may seem like uniquely human quandaries, but they are not: computers, too, face the same constraints, so computer scientists have been grappling with their version of such issues for decades. And the solutions they've found have much to teach us. In a dazzlingly interdisciplinary work, acclaimed author Brian Christian and cognitive scientist Tom Griffiths show how the algorithms used by computers can also untangle very human questions. They explain how to have better hunches and when to leave things to chance, how to deal with overwhelming choices and how best to connect with others. From finding a spouse to finding a parking spot, from organizing one's inbox to understanding the workings of memory, Algorithms to Live By transforms the wisdom of computer science into strategies for human living.
