WANT A NON-CODING JOB AT A TECH COMPANY? Interested in product management, marketing, strategy, or business development? The tech industry is the place to be: nontechnical employees at tech companies outnumber their engineering counterparts almost 3 to 1 (Forbes, 2017). You might be worried that your lack of coding skills or tech industry knowledge will hold you back. But here's the secret: you don't need to learn how to code to break into the tech industry. Written by three former Microsoft PMs, *Swipe to Unlock* gives you a breakdown of

the concepts you need to know to crush your interviews, like software development, big data, and internet security. We'll explain how Google's ad targeting algorithm works, but Google probably won't ask you how to explain it in a non-technical interview. But they might ask you how you could increase ad revenue from a particular market segment. And if you know how Google's ad platform works, you'll be in a far stronger position to come up with good growth strategies. We'll show you how Robinhood, an app that lets you trade stocks without commission, makes money by earning interest on the unspent money that users keep in their accounts. No one will ask you to explain this. But if someone asks you to come up with a new monetization strategy for Venmo (which lets you send and receive

money without fees), you could pull out the Robinhood anecdote to propose that Venmo earn interest off the money sitting in users' accounts. We'll talk about some business cases like why Microsoft acquired LinkedIn. Microsoft interviewers probably won't ask you about the motive of the purchase, but they might ask you for ideas to improve Microsoft Outlook. From our case study, you'll learn how the Microsoft and LinkedIn ecosystems could work together, which can help you craft creative, impactful answers. You could propose that Outlook use LinkedIn's social graph to give salespeople insights about clients before meeting them. Or you could suggest linking Outlook's organizational tree to LinkedIn to let HR managers analyze their company's hierarchy and figure out what kind of

NAMED A BEST SCIENCE BOOK OF 2021 BY KIRKUS \* An acclaimed experimental physicist at CERN takes you on an exhilarating search for the most basic building blocks of our universe, and the dramatic quest to unlock their cosmic origins. "A fascinating exploration of how we learned what matter really is, and the journey matter takes from the Big Bang, through exploding stars, ultimately to you and me." (Sean Carroll) Carl Sagan once quipped, "If you wish to make an apple pie from scratch, you must first invent the

universe.” But finding the ultimate recipe for apple pie means answering some big questions: What is matter really made of? How did it escape annihilation in the fearsome heat of the Big Bang? And will we ever be able to understand the very first moments of our universe? In *How to Make an Apple Pie from Scratch*, Harry Cliff—a University of Cambridge particle physicist and researcher on the Large Hadron Collider—sets out in pursuit of answers. He ventures to the largest underground research facility in the world, deep beneath Italy's Gran Sasso mountains, where scientists gaze into the heart of the Sun using the most elusive of particles, the ghostly neutrino. He visits CERN in Switzerland to explore the "Antimatter Factory," where the stuff of science

fiction is manufactured daily (and we're close to knowing whether it falls up). And he reveals what the latest data from the Large Hadron Collider may be telling us about the fundamental nature of matter. Along the way, Cliff illuminates the history of physics, chemistry, and astronomy that brought us to our present understanding—and misunderstandings—of the world, while offering readers a front-row seat to one of the most dramatic intellectual journeys human beings have ever embarked on. A transfixing deep dive into the origins of our world, *How to Make an Apple Pie from Scratch* examines not just the makeup of our universe, but the awe-inspiring, improbable fact that it exists at all.

In recent decades cognitive science has revolutionised our understanding of the workings of the human mind. Philosophy has made a major contribution to cognitive science and has itself been hugely influenced by its development. This dynamic book explores the philosophical significance of cognitive science and examines the central debates that have enlivened its history. In a wide-ranging and comprehensive account of the topic, philosopher M.J. Cain discusses the historical origins of cognitive science and its philosophical underpinnings; the nature and role of representations in cognition; the architecture of the mind and the modularity thesis; the nature of concepts; knowledge of language and its acquisition; perception; and the relationship between the brain and

cognition. Cain draws upon an extensive knowledge of empirical developments and their philosophical interpretation. He argues that although the field has generated some challenging new views in recent years, many of the core ideas that initiated its birth are still to be taken seriously. Clearly written and incisively argued, *The Philosophy of Cognitive Science* will appeal to any student or researcher interested in the workings of the mind.

Startup Easy is a step by step guide for entrepreneurs to raise their startups in an easy manner. It is the World's first Author Assisted Book (Live Book) for Startup Entrepreneurs. The language used in this book is extremely simple with lifelike examples. Startup Easy is divided into two parts: Essentials & Fundraising.

# Bookmark File PDF Swipe To Unlock The Insiders

The essentials is the first part that includes the basics that you need to learn before understanding the second part: Fundraising. You must read this book if you are starting a new business, raising funds or scaling up your startup. The Author is a well known Investment Banker for startups having global ratings of 5 out of 5 and ranking among top 20 consultants for venture capital. Shishir Gupta is a Startup Lawyer, Investment Banker, Full Stack Developer and Startup Consultant. He has more than 18 years of business experience in different domains along with consulting experience of startups. He thought of writing this book when he found that there is no book for entrepreneurs that explains the simple concepts of startups like disruption, traction, co-founder, hacker, hustler,

hipster, angel investment etc. He also found that the business books are written by successful entrepreneurs however, the language is complex and connect with the readers is not much. This book is carefully written after considering the experience of Author in advising the real entrepreneurs. This book is for everybody and anybody who wish to explore the vast topic of startups and become entrepreneurs or have the knowledge of startup entrepreneurship. This is not a management book, therefore you won't be learning about accounting concepts or management topics like recruitment, selection, communication, motivation, planning, marketing, sales etc. In fact, this book covers what is left by the management books. After reading this book, you will understand each and everything

in the startup world. Also, you will be able to successfully raise a startup. If you are in job then this book will help you in changing your professional life, be ready for the promotions. Students will become great entrepreneurs after reading this book. This book is not boring as it is no-nonsense at all. You will be able to understand each work easily and it will ensure that you keep smiling instead of scratching your head. Examples of existing startups and entrepreneurs are included for the explanations. The best part of this book is that it is connected to reality, it won't be asking you to create an operating system to become the best startup in the world. All the tasks in this book are doable and pretty easy for a common person. This is an author-assisted book; therefore, readers can personally interact with

Technology, at least in theory, is improving our productivity, efficiency, and communication. The one thing it's not doing is making us happier. We are experiencing historically high levels of depression and dissatisfaction. But we can change that. Knowing that technology is here to stay and will continue to evolve in form and function, we need to know how to navigate the future to achieve a better balance between technology, productivity, and well-being.

Technology can drive—not diminish—human happiness. In *The Future of Happiness*, author Amy Blankson, cofounder of the global positive psychology consulting firm GoodThink, unveils five strategies

successful individuals can use, not just to survive—but actually thrive—in the Digital Age:

- Stay Grounded to focus your energy and increase productivity
- Know Thyself through app-driven data to strive toward your potential
- Train Your Brain to develop and sustain an optimistic mindset
- Create a Habitat for Happiness to maximize the spaces where you live, work, and learn
- Be a Conscious Innovator to help make the world a better place

By rethinking when, where, why, and how you use technology, you will not only influence your own well-being but also help shape the future of your community. Discover how technologies can transform the idea of "I'll be happy when . . ." to being happy now.
