This book consists of two halves. The first half of the book will explore different concepts that go hand in hand with self improvement. These concepts include focus, meta-cognition, habits, universal laws, and more. Since history is largely looked at as just being in the past, other sections in this half will explore certain historical events and question the effects they have had on some demographics and classes. The second half of this book will seek to explore consumer industry markets that will change and shape common day life in the next decade. Projects in the fields of virtual reality, automotive, and wearable technology are all explored. Along with consumer markets, the actual consumer of the next decade is explored as well as the BRICs nations and the eventual globalized economy. These first two decades of the 21st century mark the beginning of the Electric Age, and possibly the age of decentralization.
